## QLD Government vs Non-Government Schools

 $\longrightarrow$ 

On average the student to teacher ratio in non-government schools was higher than government schools in QLD over the last 17 years.

This highlights that Non-Government Schools either attract less students or more teachers (or both). Would need further data to determine relationship.

## QLD Government vs NSW and VIC Schools

QLD Government Schools had higher student to teacher ratios than Victoria.

QLD vs NSW had interesting results. QLD was higher until 2014, but NSW has been higher ever since.

Further statistical testing showed that over the last 17 years QLD Government Schools and NSW Schools have same mean ratio of students to teachers.
